DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent 5948085 to Blatter in view of US Patent 4997288 to Rosenow.

Regarding Claim 1, 13, 17, Blatter discloses the information processing system comprising a potential detection section which detects a predetermined potential applied to a serial bus terminal see Abstract & Fig. 2 item 110; a power supply section(Fig. 1 item 5V) which supplies the predetermined potential to each component part as a source potential upon detection of the predetermined potential by the potential detection(Fig. 2 item 110) section see Col 2 Ln 2-10; an information detection section(U2) which detects the predetermined information supplied to the serial bus terminal(Fig. 1 STRB_OUT/DATA_IN) see Col 5 Ln 30-39. But does not disclose the processing section which executes, subsequent to the detection of the predetermined potential by the potential detection section, selected one of the encryption and decryption process in accordance with at least the operating information supplied from the operating key arranged on the body before the detection of the predetermined information. However, Rosenow discloses the processing section which executes, subsequent to the detection of the predetermined potential by the potential detection section(Fig. 1 item 106 & Fig. 2A item Control Software for Fault Tolerant Operation),

Application/Control Number: 10/779,633

Art Unit: 2132

selected one of the encryption and decryption devices that supplied power supply see Fig. 2C item 254C, 256C in accordance with at least the operating information supplied from the operating key arranged on the body before the detection of the predetermined information see Fig. 26 item 2602 & Fig. 42 item SKEY & Fig. 26 item 2602 and in accordance with the predetermined information supplied to the serial bus terminal after detection of the predetermined information by the information detection section see Fig. 7 item 710 & 708. It would be obvious to one having ordinary skill in the art at the time of the invention to the encryption/decryption devices in the invention of Blatter in order to protect the client from network risk as taught in Rosenow see Col 2 Ln 20-34.

Regarding Claim 2, 6, Blatter discloses the initially set in operation mode for executing the processing operation in accordance with operating information supplied from the operation key see Col 5 Ln 40-49.

Regarding Claim 3-5, Blatter discloses the potential being used to change into mode and the operation key being used to perform operation see Col 2 Ln 51-63 & Col 4 Ln 19-31.

Regarding Claim 7, 9-10, Blatter discloses the lapse in time for detection of potential and recording or reproducing operation see Col 4 Ln 45-59 & Col 5 Ln 7-13.

Regarding Claim 8, 14, Blatter does not disclose the encryption/decryption process. However, Rosenow discloses the encryption/decryption process see Fig. 2B.

Application/Control Number: 10/779,633

Art Unit: 2132

Regarding Claim 11-12, 15-16, Rosenow discloses the process being carried without regard to the

information detection section see Fig. 2B.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be

directed to Venkat Perungavoor whose telephone number is 571-272-7213. The examiner can

normally be reached on 8:30-5:00. If attempts to reach the examiner by telephone are unsuccessful,

the examiner's supervisor, Gilberto Barron can be reached on 571-272-3799. The fax phone

number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application

Information Retrieval (PAIR) system. Status information for published applications may be

obtained from either Private PAIR or Public PAIR. Status information for unpublished applications

is available through Private PAIR only. For more information about the PAIR system, see

http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system,

contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like

assistance from a USPTO Customer Service Representative or access to the automated information

system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
